

Easy. Easier. Mhouse.

**The revolutionary system
for automating your home
in an incredibly quick
and easy way.**

Now even with
solar energy supply.

mhouse
the house in a click
y

Mhouse self fit Kit: everything's easy, everything's included!

Mhouse has developed a leading-edge range of products combining a complete set of functions, ease of installation and use, and expandability towards home automation applications.

Find out more about this revolutionary self fit kit system for automating gates, garage doors, awnings and rolling shutters in an incredibly quick and easy way.

Control of the home by a simple click!

Alarm systems and integrated management of automations, all in one unit.

With a single Mhouse transmitter, the alarm systems and automations for gates, garage, awnings and rolling shutters, as well as lighting, are always under control.

Mhouse: when less is better!

Mhouse constitutes a single pack containing all that's needed for easy to install automations with professional results.

The exclusive, highly refined and practical Mhouse accessories complete the automation, personalising it according to the diverse requirements of the user.

Alarm System

Swing gates surface-mounted, or underground installation

Sliding gates

Sectional or up-and-over doors

Rolling shutters, solar screens, awnings

Lighting and irrigation systems

Maximum safety with low voltage connections and automatic detection of obstacles.

Just two wires! The ECSBus system connects all devices with just 2 wires: thanks to no need for observing polarity, there is no risk of errors.

The freedom of an ecological and wireless system

PF is a new solar power kit for the automation of swing or sliding gates, installable anywhere, with no excavation work or connections. An intelligent and ecological choice!

Style and substance

Mhouse has created a perfect Italian-style line of products characterised by careful, efficient design, so distinctive as to be always recognizable.

A good design is the basis of quality. Mhouse's awareness to achieve the finest results is revealed in every detail: cutting-edge technology, high quality materials, accurate finish.

10/11 solar power system

PF kit

Solar power kit for swing and sliding gate automations.

12/25 for swing gates

Kit for automating a pedestrian gate (**WT1S, WG10S**); or a two-leaf residential gate (**WT2S, WS2S, WG2S, WG20S**).

Innovative installation under the leaf (**WU2S**).

26/29 for sliding gates

SL1S, SL10S

Kits for the automation of a sliding gate.

30/35 for garage doors

GD0N, GD1N, GD10N

Kits for the automation of a sectional door and up-and-over doors.

36/39 for shutters and sun awnings

RM15 - RM30 - RM45

RME15N - RME30N - RME45N

Kit for rolling shutter or awning automation, with or with-out built-in control unit and receiver.

40 awnings and rolling shutters radiocontrol kit

RT3N

Kit easy to install to radio control any rolling shutter, awning or rolling garage door.

41 kit to control lighting and irrigation systems

RC2

The receiver allows to control at a distance lighting, irrigation and alarm systems.

42/47 accessories

Miniaturized transmitters, flashing light, autosynchronized photocells and switches.

Solar power system for gate automations PF kit

MhouseKit PF uses solar energy, replacing the electrical mains as the source of power for automating a gate, even if located far from the electrical mains, with no need for excavations for necessary connections. The battery, recharged by the solar panel*, provides a reserve of energy for a great number of manoeuvres.

*rechargeable also via the power mains, using the optional power supply unit PBC.

Installable anywhere without the need for excavations or connections to the electrical mains, even in locations far away or difficult to access.

Economical and ecological thanks to solar energy, free and clean: an ecological and intelligent choice with short term benefits.

Low consumption with no risk of blackouts

The energy reserve levels, combined with low consumption of the automations, guarantee operation even in prolonged overcast weather conditions. Auxiliary power supply, which allows a quick battery recharge through 230 V electric system as an alternative to the photovoltaic module.

Each Kit PF contains:

1 PB Box for 24 V 20 Ah battery, with carry handle. Dim. 23.5 x 25.8 x 17 cm. Luminous and acoustic signals to indicate battery charge status.

1 PC Photovoltaic solar panel 10 W, for 24 V power supply. Dim. 36.7 x 28.5 cm; brackets included.

Optional accessories:

PBC Battery charger power supply unit, for PF.

Packaging characteristics

Package dimensions (mm)	410x255x330
Package weight (kg)	14
EAN code	8032595791768

The content of the package may vary; consult the retailer. For updated and complete information, consult the product technical manual.

Fast and ultra-compact, even in the presence of small columns WT1S kit

Kit for automating a pedestrian gate up to 1.6 m in width and 100 kg weight. Particularly suitable for wood and PVC gates.

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for the accessories.

Ultra-compact: ideal for pedestrian gates even with small size columns (10 cm width).

The **smooth and precise** movements mean that even gates with a delicate structure can be automated.

Precise: due to the closure mechanical stop integrated into the arm (with whole-arm installation).

Safe: due to the irreversible motor and the anti-shear arm.

Practical: the articulated arm allows for installation in special conditions such as the presence of walls or obstacles adjacent to the column.

No waiting in front of the gate: only 7 seconds to open and close (in perfect installation conditions, making the most of the whole run and with a 90° opening).

Convenient: the motor bracket can be rotated so as to assure improved fixing to low-strength supports such as brick columns.

Extra safe thanks to the low-voltage connections (24 V), the safety accessories and the automatic obstacle detection feature.

Auto-programming: WT1S automatically calculates the most suitable operating parameters for each gate.

Autodiagnostic system identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- Timed and adjustable automatic closing function
- Programming of new transmitters
- Adjustable partial opening function
- Pause time adjustment
- Obstacle sensitivity adjustment
- Automatic recognition of NC-NO-8.2 KOhm safety devices, if installed.

Quick motor release for manual gate operation.

No black-out: the buffer batteries guarantee up to ten opening and closing manoeuvres even in the event of power outages (accessory).

Each Kit WT1S contains:

1 WT1SC Electromechanical gear motor with integrated control unit and 433.92 MHz variable code receiver.

2 GTX4 433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

Optional accessories

PH100 Pair of wall-mounted autosynchronized photocells.

KS100 Two-position (open/stop) key-operated selector switch with pair of metal keys.

DS1 13-key digital switch with programmable code, via radio.

Optional accessories

PF Solar power kit.

PBC Battery charger power supply unit, for PF.

PT50 Two 485 mm high posts including one pair of photocells.

FL100 Adjustable flashing light, with built-in aerial.

EL1 12 V electric lock interface.

PR2 Buffer battery for emergency power supply.

PT100 Two 945 mm high posts including two pairs of photocells.

For two-leaf gate, even in the presence of small columns WT2S kit

Kit for automating a two-leaf residential gate with each leaf up to 1.6 m in width and 100 kg weight. Especially suitable for wood or PVC gates.

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for accessories.

Ultra-compact: WT2S is ideal for gates even with small size columns (10 cm width).

The **smooth and precise** movements mean that even gates with a delicate structure can be automated.

Precise: due to the closure mechanical stop integrated into the arm (with whole-arm installation).

Safe: due to the irreversible motor and the anti-shear arm.

Practical: the articulated arm allows for installation in special conditions such as the presence of walls or obstacles adjacent to the column.

No waiting in front of the gate: only 7 seconds to open and close (in perfect installation conditions, making the most of the whole run and with a 90° opening).

Convenient: the motor bracket can be rotated so as to assure improved fixing to low-strength supports such as brick columns.

Extra safe thanks to the low-voltage connections (24 V), the safety accessories and the automatic obstacle detection feature.

Auto-programming: WT2S automatically calculates the most suitable operating parameters for each gate.

Autodiagnostic system identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters
- Adjustable partial opening function

Compact and elegant, also for large posts and light structures WS2S kit

Kit for automation of a residential two-leaf gate, each leaf measuring up to 2.2 m in width and weighing up to 200 kg. Especially suitable for wood or PVC gates.

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for accessories.

Compact and fast: WS2S is ideal for gates with very deep pillars, which can be easily operated thanks to its articulated arm. Its smooth and precise movements make it suitable for the most delicate gates.

Precise: opening/closing mechanical limit-switch.

No waiting in front of the gate: only 10 seconds to open and close (in perfect installation conditions, making the most of the whole run and with a 90° opening).

Extra safe thanks to the low-voltage connections (24 V), the safety accessories and the automatic obstacle detection feature.

Auto-programming: WS2S automatically calculates the most suitable operating parameters for each gate.

Autodiagnostic system identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters (up to 150)
- Adjustable partial opening function
- Pause time adjustment
- Obstacle sensitivity adjustment
- Automatic recognition of NC-NO-8.2 KOhm safety devices, if installed.

Quick motor release for manual gate operation.

No black-out: the buffer batteries guarantee up to ten opening and closing manoeuvres even in the event of power outages (accessory).

Each Kit WS2S contains:

1 WS1SC Electromechanical gear motor with control unit for control of two motors with integrated 433.92 MHz variable code receiver.
1 WS1SK Electromechanical gear motor without control unit.

2 GTX4 433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

PH100 Pair of wall-mounted autosynchronized photocells.

FL100 Adjustable flashing light, with built-in aerial.

New curved anti-shear arms, three Mhouse release keys, opening and closing mechanical stop and mounting plates included.

Optional accessories

PF Solar power kit.

PBC Battery charger power supply unit, for PF.

DS1 13-key digital switch with programmable code, via radio.

KS100 Two-position (open/stop) key-operated selector switch with pair of metal keys.

PT50 Two 485 mm high posts including one pair of photocells.

PT100 Two 945 mm high posts including two pairs of photocells.

EL1 12 V electric lock interface.

PR1 Buffer battery for emergency power supply.

Ultrathin, it can be fixed under the leaf for minimum overall dimensions WU2S kit

Kit for automation of a residential two-leaf gate, each leaf measuring up to 1.8 m in width and weighing up to 200 kg. The most discreet: the very reduced height of the motor (73.5 mm) allows it to be installed between the gate leaf and the ground. By partially burying the motor, the total clearance required is only 60 mm!

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for accessories.

Simple and economic: with WU2S no excavations or structural modifications are needed in order to bury the motor under the gate, so you won't have to spend money for masonry work.

Guaranteed IP67 water-tightness; extremely sturdy casing made entirely of die-cast sealed aluminium.

No waiting in front of the gate: only 9 seconds to open and close (in perfect installation conditions, making the most of the whole run and with a 90° opening).

“Plug 'n Play” connections very simple and quick, with easy identification of wires and terminals.

Easy Connection System: ECSBus system for connection of up to seven pairs of photocells using only two wires.

Extra safe thanks to the low-voltage connections (24 V), the safety accessories and the automatic obstacle detection feature.

Auto-programming: WU2S automatically calculates the most suitable operating parameters for each gate.

Autodiagnostic system identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters (up to 150)
- Adjustable partial opening function
- Pause time adjustment
- Obstacle sensitivity adjustment
- Automatic recognition of NC-NO-8.2 KOhm safety devices, if installed.

Quick motor release for manual gate operation.

No black-out: the buffer batteries guarantee up to ten opening and closing manoeuvres even in the event of power outages (accessory).

Small size foundation boxes, included in the kit.

Each Kit WU2S contains:

2 WU1SK Electromechanical gear motors. 3 release keys and foundation/mounting plate included.

2 WUA Straight slotted arms.

2 GTX4 433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

PH100 Pair of wall-mounted autosynchronized photocells.

FL100 Adjustable flashing light, with built-in aerial.

1 CL2S External control unit for control of two WU1SK electromechanical gear motors with integrated 433.92 MHz variable code receiver.

Optional accessories

PF Solar power kit.

PBC Battery charger power supply unit, for PF.

DS1 13-key digital switch with programmable code, via radio.

KS100 Two-position (open/stop) key-operated selector switch with pair of metal keys.

PT50 Two 485 mm high posts including one pair of photocells.

PT100 Two 945 mm high posts including two pairs of photocells.

EL1 12 V electric lock interface.

PR1 Buffer battery for emergency power supply.

The strong solution, for swing gates WG2S kit

Kit for automation of a residential two-leaf gate, each leaf measuring up to 2.2 m in width and weighing up to 250 kg.

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for accessories.

Strength and elegance: WG2S, with its die-cast aluminium casing that will match any style, can open the heaviest gates without effort.

No welding required adjustable multi-position brackets.

Easy Connection System: ECSBus system for connection of up to seven pairs of photocells using only two wires.

Extra safe thanks to the low-voltage connections (24 V), the safety accessories and the automatic obstacle detection feature.

Auto-programming: WG2S automatically calculates the most suitable operating parameters for each gate.

Autodiagnostic system identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters (up to 150)
- Adjustable partial opening function
- Pause time adjustment
- Obstacle sensitivity adjustment
- Automatic recognition of NC-NO-8.2 KOhm safety devices, if installed.

Quick motor release for manual gate operation.

No black-out: the buffer batteries guarantee up to ten opening and closing manoeuvres even in the event of power outages (accessory).

Each Kit WG2S contains:

2 WG1SK

Electromechanical worm gear motor with three Mhouse release keys and adjustable mounting brackets included.

2 GTX4

433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

PH100

Pair of wall-mounted autosynchronized photocells.

FL100

Adjustable flashing light, with built-in aerial.

1 CL2S

External control unit for control of two WU1SK electromechanical gear motors with integrated 433.92 MHz variable code receiver.

Optional accessories

PF Solar power kit.

PBC Battery charger power supply unit, for PF.

DS1 13-key digital switch with programmable code, via radio.

KS100 Two-position (open/stop) key-operated selector switch with pair of metal keys.

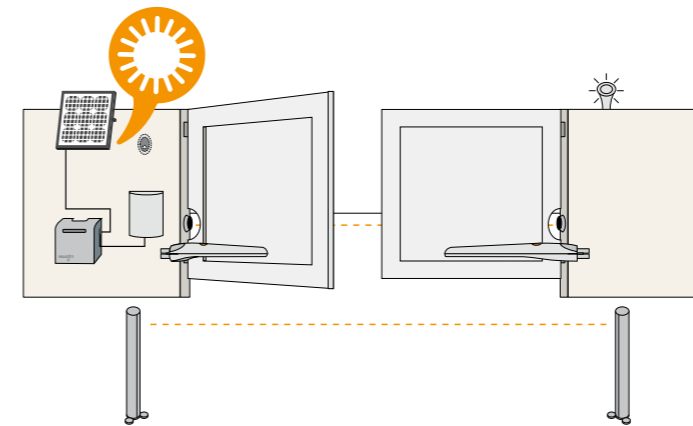

PT50 Two 485 mm high posts including one pair of photocells.

EL1 12 V electric lock interface.

PR1 Buffer battery for emergency power supply.

PT100 Two 945 mm high posts including two pairs of photocells.

Simple and linear design, for one-leaf swing gate opener WG10S kit

Kit for the automation of a residential one-leaf gate measuring up to 4.5 m in width or weighing up to 450 kg.

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for accessories.

Strength and elegance: WG10S, with its die-cast aluminium casing that will match any style, can open the heaviest gates without effort.

No welding required: adjustable multi-position brackets.

“Plug ’n Play” connections very simple and quick, with easy identification of wires and terminals.

Easy Connection System: ECSSBus system for connection of up to seven pairs of photocells using only two wires.

Noiseless and reliable: body made of painted die-cast aluminium; mechanical parts made of metal.

Maximum safety ensured by the low voltage connections and the automatic obstacle detection feature.

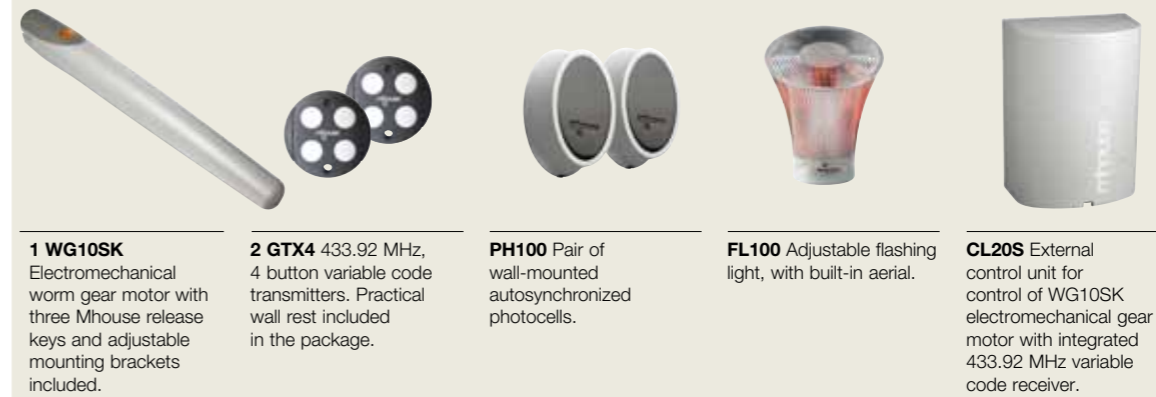

Modular control card with (integrated) built-in receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters
- Adjustable partial opening to restrict the passage to pedestrians and cycles
- Pause time adjustment
- Obstacle sensitivity adjustment.

Quick motor release for manual gate operation. Opening and closing mechanical limit-switch.

No black-out: operation during power failures guaranteed by the PR1 buffer batteries (optional).

Each Kit WG10S contains:

1 WG10SK

Electromechanical worm gear motor with three Mhouse release keys and adjustable mounting brackets included.

2 GTX4

433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

PH100

Pair of wall-mounted autosynchronized photocells.

FL100

Adjustable flashing light, with built-in aerial.

CL20S

External control unit for control of WG10SK electromechanical gear motor with integrated 433.92 MHz variable code receiver.

Optional accessories

PF

Solar power kit.

PBC Battery charger power supply unit, for PF.

DS1

13-key digital switch with programmable code, via radio.

KS100

Two-position (open/stop) key-operated selector switch with pair of metal keys.

PT50

Two 485 mm high posts including one pair of photocells.

PT100

Two 945 mm high posts including two pairs of photocells.

EL1

12 V electric lock interface.

PR1

Buffer battery for emergency power supply.

The most powerful, for swing gates WG20S kit

Kit for the automation of a residential two-leaf gate, each leaf measuring up to 4.5 m in width or weighing up to 450 kg for leaf.

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for accessories.

Strength and elegance: WG20S, with its die-cast aluminium casing that will match any style, can open the heaviest gates without effort.

No welding required: adjustable multi-position brackets.

No waiting in front of the gate: only 20 seconds to open and close. (in perfect installation conditions, making the most of the whole run and with a 90° opening).

Extra safe thanks to the low-voltage connections (24 V), the safety accessories and the automatic obstacle detection feature.

Auto-programming: WG20 automatically calculates the most suitable operating parameters for each gate.

Autodiagnostic system identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters (up to 150)
- Adjustable partial opening function
- Pause time adjustment
- Obstacle sensitivity adjustment
- Automatic recognition of NC-NO-8.2 KOhm safety devices, if installed.

Quick motor release for manual gate operation.

No black-out: the buffer batteries guarantee up to ten opening and closing manoeuvres even in the event of power outages (accessory).

Each Kit WG20S contains:

2 WG10SK
Electromechanical worm gear motor with three Mhouse release keys and adjustable mounting brackets included.

2 GTX4 433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

PH100 Pair of wall-mounted autosynchronized photocells.

FL100 Adjustable flashing light, with built-in aerial.

CL20S External control unit for control of WG10SK electromechanical gear motor with integrated 433.92 MHz variable code receiver.

Optional accessories

PF Solar power kit.
PBC Battery charger power supply unit, for PF.

DS1 13-key digital switch with programmable code, via radio.

KS100 Two-position (open/stop) key-operated selector switch with pair of metal keys.

Compact and elegant, for sliding gates SL1S kit

Kit for automation of a residential sliding gate weighing up to 400 kg and 5 m max. long.

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for accessories.

Reliable and noiseless: mechanical parts made of metal, die-cast painted aluminium base, gear motor mounted on bearings.

No waiting in front of the gate: only 18 seconds to open and close (in perfect installation conditions, for a sliding gate 4 m long).

Extra safe thanks to the low-voltage connections (24 V), the safety accessories and the automatic obstacle detection feature.

Auto-programming: automatically calculates the most suitable operating parameters for each gate.

Autodiagnostic system identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters (up to 150)
- Adjustable partial opening function
- Pause time adjustment
- Obstacle sensitivity adjustment
- Automatic recognition of NC-NO-8.2 KOhm safety devices, if installed.

Quick motor release for manual gate operation.

No black-out: the buffer batteries guarantee up to ten opening and closing manoeuvres even in the event of power outages (accessory).

Each Kit SL1S contains:

1 SL1SC Electromechanical gear motor with integrated control unit and 433.92 MHz variable code receiver. 3 Mhouse release keys and mounting plate included.

2 GTX4 433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

PH100 Pair of wall-mounted autosynchronized photocells.

FL100 Adjustable flashing light, with built-in aerial.

Optional accessories

PF Solar power kit.

PBC Battery charger power supply unit, for PF.

DS1 13-key digital switch with programmable code, via radio.

KS100 Two-position (open/stop) key-operated selector switch with pair of metal keys.

PT50 Two 485 mm high posts including one pair of photocells.

PT100 Two 945 mm high posts including two pairs of photocells.

PR1 24 V buffer battery for emergency power supply.

CR100 Nylon gear rack with steel core, four 1-metre sections
CR25 one 1-metre sections.

The strong solution, for sliding gates SL10S kit

Kit for automation of a residential sliding gate
weighing up to 550 kg and 7 m max. long.

New:

Compatibility with MhouseKit PF, the kit for Solar power automations, to automate gates without the need for connections to the electrical mains, even in locations far away or difficult to access.

New Design for accessories.

Reliable and noiseless: mechanical parts made of metal, die-cast painted aluminium base, gear motor mounted on bearings.

No waiting in front of the gate: only 23 seconds to open and close (in perfect installation conditions, for a sliding gate 4 m long).

Extra safe thanks to the low-voltage connections (24 V), the safety accessories and the automatic obstacle detection feature.

Auto-programming: automatically calculates the most suitable operating parameters for each gate.

Autodiagnostic system identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters (up to 150)
- Adjustable partial opening function
- Pause time adjustment
- Obstacle sensitivity adjustment
- Automatic recognition of NC-NO-8.2 KOhm safety devices, if installed.

Quick motor release for manual gate operation.

No black-out: the buffer batteries guarantee up to ten opening and closing manoeuvres even in the event of power outages (accessory).

Each Kit SL10S contains:

1 SL10SC Electromechanical gear motor with integrated control unit and 433.92 MHz variable code receiver. 3 Mhouse release keys and mounting plate included.

2 GTX4 433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

PH100 Pair of wall-mounted autosynchronized photocells.

FL100 Adjustable flashing light, with built-in aerial.

Optional accessories

PF Solar power kit.
PBC Battery charger power supply unit, for PF.

DS1 13-key digital switch with programmable code, via radio.

KS100 Two-position (open/stop) key-operated selector switch with pair of metal keys.

PT50 Two 485 mm high posts including one pair of photocells.

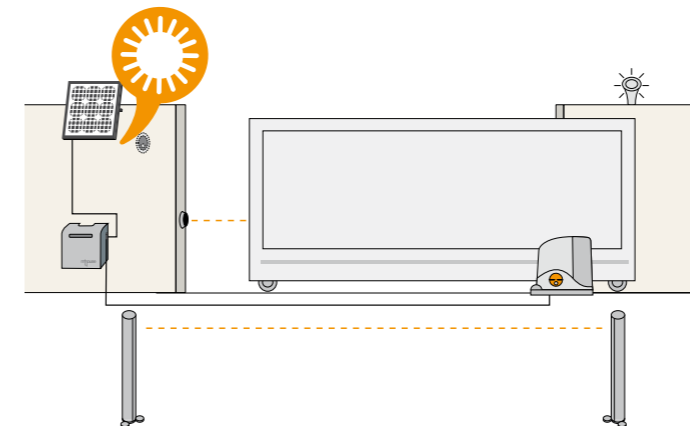

PR1 24 V buffer battery for emergency power supply.

CR100 Nylon gear rack with steel core, four 1-metre sections
CR25 one 1-metre sections.

Installation

Technical characteristics

Power supply (Vac)	230
Power (W)	420
Thrust (N)	475
Speed (m/sec)	0.12 ÷ 0.18
Protection class (IP)	44
Weight (kg)	10
Certification	CE

For updated and complete information, consult the product technical manual.

Packaging characteristics

Package dimensions (mm)	560x210x360
Package weight (kg)	11.80
Palletization (pz)	21
EAN Code	8032595792284

For accessories
new
design

User-friendly and quick to install in any garage GD0N

Kit for automation of a sectional door up to 3.7 m in width and up to 2.4 m high and up-and-over doors* up to 3.5 m in width and up to 2.8 m high.

* with GA1 accessory

New:

New Design for accessories.

For quick installation in any space, with 180° adjustable head.

Reliable and noiseless: mechanical parts made of metal, belt drive with sturdy steel core, high-resistance galvanized steel guide (**three 1-meter pieces**).

Powerful timed courtesy light: 21 W.

No waiting in front of the gate: only 18 seconds to open and close (in perfect installation conditions, for a sectional door 2.5 m high).

Maximum safety ensured by the low voltage connections (24 V), the safety accessories and the magnetic encoder: automatic obstacle detection feature, with extra sensitive cut-in threshold thanks to **mapping of the force along the entire travel**.

Auto-programming: GD0N automatically calculates the most suitable operating parameters for each door.

Autodiagnostic system: identifies and immediately signals any connection errors or malfunctions.

Modular control card with integrated receiver

- 2 speeds
- Timed and adjustable automatic closing function
- Programming of new transmitters (up to 150)
- Adjustable partial opening function
- Pause time adjustment
- Obstacle sensitivity adjustment
- Automatic recognition of NC-NO-8.2 KOhm safety devices, if installed.

Manual release for manual door operation in case of power failures.

Each Kit GD0N contains:

1 GD0N Electromechanical 24 V gear motor with integrated control unit and 433.92 MHz variable code receiver, belt drive on galvanized steel guide, emergency release device.

2 GTX4 433.92 MHz, 4 button variable code transmitters. Practical wall rest included in the package.

Optional accessories

GA1 Oscillating arm sliding on bearings. **Compulsory for counterbalanced up-and-over doors.**

GU1 Kit for external release using steel cord.

Optional accessories

PH00 Pair of wall-mounted autosynchronized photocells.

KS100 Two-position (open/stop) key-operated selector switch with pair of metal keys.

DS1 13-key digital switch with programmable code, via radio.

FL100 Adjustable flashing light, with built-in aerial.

Comfort and safety, for all shutters and sun awnings RM15 - RM30 - RM45

Kit for rolling shutter or awning automation,
featuring 45 mm diameter tubular motors.

Reduced dimensions: only 507 mm
in total length ideal for the narrowest
of shutters and awnings and in the most
confined of roller enclosures.

Convenience: powerful, noiseless
and reliable motor mounted on bearings.

Easy installation

- avec les adaptateurs de type octogonal
- with the special octagonal adapter
and support provided
- simple and precise adjustment
of limit positions on opening and closing
thanks to mechanical limit switch
- pre-connected 3-metre motor cable;
- immediate connection to activation
buttons.

Radio controlled **with the kit RT3N,
composed of a control unit with
RC1 receiver and a 3 button STX1
transmitter (optional):** easy to install
and ready to use.

Each Kit RM contains:

1 RM 45 mm diameter 230 Vac tubular gear motor
with mechanical limit-switch, equipped with
hardware pack.
RM15, 15 Nm torque
RM30, 30 Nm torque
RM45, 45 Nm torque.

1 535.10010 Plate
support with 2 M5
threaded holes

1 515.06000
Octagonal 60 wheel +
crown

585.10200
Key for limit switch
adjustment

Optional accessories

RT3N Awnings and rolling
shutters radiocontrol Kit:
- 1 RC1 control unit
- 3 button STX1 transmitter with wall bracket.

515.17800
Round Ø 80 Notch 78
wheel + crown.

515.17000 Notch Ø 70
wheel + crown.

Technical characteristics

For accessories
new design

Advanced performance, for rolling shutters and sun awnings RME15N - RME30N - RME45N

Kit for rolling shutter or awning automation, including a 45 mm diameter tubular motors. Built-in control unit and receiver, electronic limit switch and encoder movement control.

New:

New Design for accessories.

Exclusive and functional design: even more compact motor head.

Reduced dimensions: only 507 mm in total length ideal for the narrowest of shutters and awnings and in the most confined of roller enclosures.

Comfort: powerful, noiseless and reliable.

Easy installation thanks to the special octagonal adapter and support provided.

Safe: shutter stop with shutdown of movement in event of obstacles and repetition of manoeuvre in the presence of ice or bolts engaged.

Built-in control unit and receivers: easy remote programming and exclusive functions.

Safe transmissions: receiver at 433,92 MHz with self-learning mode, Rolling Code with over 4.5 million billion combinations.

Easy and comfortable **(STX1) radio controlled limit switch adjustment, without having to open the shutters box.** Possibility of programming a stop at an **intermediate position.**

Visual signals simplify programming phases.

Maximum functionality: STX1 transmitter included (already memorised) possibility of controlling multiple motors with optional STX4 transmitter.

Easy remote entry of transmitters with no need for connection to the motor.

Encoder technology: millimetric precision and maintenance of set values over time; stress on the shutter always optimal and constant.

Perfect closure of housing with encoder and automatic adjustment of canvas tension to avoid unsightly tension failure and guarantee constantly perfect movements.

Each Kit RMEN contains:

1 RMEN Tubular gear motor Ø 45 m, 230 Vac with built-in control unit, receiver, electronic limit-switches and hardware pack
RME15N, 15 Nm torque
RME30N, 30 Nm torque
RME45N, 45 Nm torque.

1 STX1 3 buttons variable code transmitters. Practical wall rest included in the package.

1 535.10010 Sheet steel support with two M5 threaded holes.

1 515.06000 Octagonal 60 wheel + ring.

Optional accessories

STX1, STX2, STX4
1, 2, 4 channels for the control of single automations or groups.

DS1 13-key digital switch with programmable code, via radio.

515.17800
Round Ø 80 - Cap 78 wheel + ring.

515.17000
Cap Ø 70 wheel + ring.

525.10012/M6AX
max 30 Nm
Bracket kit and square pivot 10 mm threaded holes.

Awnings and rolling shutters radiocontrol kit RT3N

Kit consisting of one control unit with RC1 receiver and a 3-button STX1 transmitter to radio control any rolling shutter, awning or rolling garage door.

RC1 technical characteristics

Possibility of remote control	all Mhouse transmitters range
Power supply (Vac)	230
Power (W)	500
Dimensions (mm)	98x26x20
Weight (gr)	45

STX1 technical characteristics

See page 43

The **STX1 transmitter**, produced for the control of rolling shutters and awnings, has three buttons, up, stop and down, and thanks to the 18 billion billion variable code combinations, guarantees absolute security.

Built-in 433.92 MHz radio receiver possibility of memorising up to 30 transmitters.

RC1 control unit is suitable for all RM and RS series tubular motors or any motor up to 500 W.

Compact size: only 98x26x20 mm.

Protection class: IP55.

Complete with wall bracket.

User-friendly installation and ready for use immediately.

Lighting, irrigation and burglar systems controlled by a single remote control RC2

To control at a distance lighting, irrigation, burglar and alarm systems using the same STX4 transmitter used for the gate and garage door automation.

RC2 technical characteristics

Power supply (Vac)	230
Power (W)	500
Manoeuvre duration (sec)	Timer 1 Timer 2 from 0.5" to 540'
Programmable functions (Mode 1)	On-Off
Programmable functions (Mode 2)	On - Off - Man Present - Timer 1 - Timer 2
Dimensions (mm)	98x26x20
Weight (gr)	45

The control unit is suitable to supply loads with 230 Vac mains supply and an output of 500 W.

Compact size: only 98x26x20 mm.

Protection class: IP55

Built-in 433.92 MHz radio receiver: with over 18 billion billion combinations and the possibility of memorising up to 30 transmitters.

User-friendly installation and ready for use immediately.

Internal terminal board for connection.

Automatic switch off: possibility of programming 2 independent timers from a minimum of 0.5" to a maximum of approximately 9 hours.

Maximum control versatility with 2 transmitter memorisation modes
Modo I: ON - OFF with separate buttons
Modo II: ON - OFF - Man present - Timer.

new design

Transmitter GTX4

Miniaturized transmitter for gates and garage doors, 433.92 MHz rolling code system with self-learning function.

Code	Description
GTX4	4 keys for control automation systems or automation groups.

Technical data

Frequency (MHz)	433.92
Coding	Digital 64 bits (18 billion billion)
Range (m)	50-100
Power supply	6 V +20% -40% with CR2016 type lithium batteries
Buttons	4
Dimensions (mm)	72x31x11h
Weight (gr)	18

Total security ensured by the variable code with 18 billion billion combinations!

Unclonable: the code varies with each transmission according to an algorithm that masks the code and does not show any relation with the following ones, which can only be recognized by the Mhouse receiver: the same technology used in antitheft systems.

Convenience: 4 keys for control of as many devices, transmission confirmation led, key ring eyelet. Very autonomous and lightweight with the two 3 V lithium batteries.

Practical wall rest included in the package.

new design

Transmitter STX1

Transmitter for awnings and rolling shutters 433.92 MHz rolling code system with self-learning function.

Code	Description
STX1	3 keys for control automation systems or automation groups. Open - Stop - Close.

Technical data

Frequency (MHz)	433.92
Coding	Digital 64 bits (18 billion billion)
Range (m)	50-100
Power supply	6 V +20% -40% with CR2016 type lithium batteries
Buttons	3
Dimensions (mm)	72x31x11h
Weight (gr)	18

The STX1 transmitter with its three up, stop and down keys, has been specifically produced for the control of rolling shutters and awnings.

Convenience: transmission confirmation led, key ring eyelet. Very autonomous and lightweight with the two 3 V lithium batteries.

Total security ensured by the variable code with 18 billion billion combinations!

Unclonable: the code varies with each transmission according to an algorithm that masks the code and does not show any relation with the following ones, which can only be recognized by the Mhouse receiver: the same technology used in antitheft systems.

All under control: management of up to 5 Open-Stop- Close automation systems or automation groups.

Practical wall rest included in the package.

Receiver R2

Pre-wired receiver: 2 variable code outputs with 433.92 MHz transmission frequency and self-learning function.

Easy installation: the colour-coded terminals enable quick, error-proof connections. This universal receiver can also be used with pre-existing automations.

Two outputs for control of as many devices, which can be freely linked to any key on the transmitter.

Convenience: programming key for transmitter memorization. Remote code memorization using an authorized transmitter. A LED confirms that the transmitter is operational.

Technical characteristics

Frequency (MHz)	433.92
Memory (no. of transmitters)	256
Power supply (Vac-Vdc)	12-24
Outputs	2
Dimensions (mm)	86x57x22h
Weight (gr)	55

Digital switch DS1

Digital switch with programmable code, via radio.

Radio digital switch with programmable code 13-key radio digital switch: wireless easy installation. Compatible with the Mhouse receivers with rolling code technology. It generates 18 billion billion combinations, with self-learning functions.

Complete: 3 transmission channels to control as many automations. Light-up-when-necessary button.

Safe: 9.999.999.999 possible combinations by choosing a number from 0 up to 10 figures.

Clever: very easy code-changing. The same system used for mobile phone with PUK code in case you forget the one you programmed.

Cheap: extra low consumption, transmission is activated when any key is pressed and it switches itself off automatically.

Technical specifications

Frequency (MHz)	433.92 ± 100KH
Radio coding	rolling code 64bit
Range (m)	100; 35 if inside buildings
Power supply	6 Vdc with 2 CR2430 type lithium batteries
Battery life (estimated)	2 years with 10 transmissions per day
No. of figure combination	from 0 to 10
Protection rating (IP)	44
Dimensions (mm)	65x95x33
Weight (g)	260

Key switch KS100

Two-position key-operated selector switch.

Easy installation: the colour-coded terminals enable quick, error-proof connections.

Convenience: LED helps locate the selector switch even in total darkness. Equipped with two metal keys. Possibility of commanding two different functions associated with the turning direction of the key.

Security: electronics protected by a second plastic enclosure to prevent damage during installation.

Sturdiness: extra thick polycarbonate body.

Protection class: IP55.

new design

Photocells PH100 - PH00

Pair of wall-mounted autosynchronized photocells.

PH100, easy installation with the Mhouse ECSBus system: only two wires are required for connection of the main system components, and there is no need to follow any particular order! Wasting time connecting to the photocell terminals is no longer necessary, simply connect the two wires at any point within the system.

Convenient jumpers for selection of the required function. Up to 7 pairs of photocells can be installed without worrying about their proximity.

PH00, pair of synchronised traditional photocells (without ECSBus System): Only for GD0N.

Common features
Maximum security: electronics protected by a second plastic enclosure to prevent damage during installation. The antidazzle circuit protects you from blinding glares generated by the sun or other powerful light sources.

Convenience: very simple alignment thanks to the LED signal with proportional flashing.

Sturdiness: extra thick polycarbonate body.

new design

Technical characteristics

PH100 power supply	Provided directly by the ECSBus system
PH00 power supply	Standard 12-24 Vac/Vdc
Protection class (IP)	55

Posts PT50 - PT100

High posts, with a pre-assembled photocell on each, adjustable height.

PT50 pair of 485 mm high posts, with a pre-assembled photocell on each, adjustable height.

PT100 pair of 945 mm high posts, with two pre-assembled photocells on each, adjustable height.

Easy installation with the Mhouse ECSBus system: only two wires are required for connection of the main system components. The colour-coded terminals, enable quick, error-proof connections. Wasting time connecting to the photocell terminals is no longer necessary, simply connect the two wires at any point within the system.

Sturdy and elegant: made of profiled aluminium with polycarbonate front and shock-resistant base.

Convenience: very simple alignment thanks to the LED signal with proportional flashing. Convenient jumpers for selection of the required function.

Maximum security: electronics protected by a second plastic enclosure to prevent damage during installation. The antidazzle circuit protects you from blinding glares generated by the sun or other powerful light sources. Suitable for Mhouse systems of any size, since up to 7 pairs of photocells can be installed without worrying about their proximity.

Technical characteristics

Power supply	Provided directly by the ECSBus system
Protection class (IP)	55

Interface EL1

12 V electric lock interface.

Practical: Electronic locks fitted on swing gate automatisms can be activated by means of the EL1 device.

Only compatible with:

1. Initial release type electronic locks (single command impulse at the beginning of the opening manoeuvre), with a maximum power supply of 12 Vac 15 VA

2. Mhouse control units having the "EL1" indication on the FLASH output.

Technical characteristics

Flashing light output	For indicator lights with 12V, max. 21W bulb.
Electronic lock output:	12 Vac - max. 15 VA
Electronic lock activation time:	approx. 2 s.
Protection class (IP)	30
Dimensions (mm)	60x59x422 with flaps, 60x38x422 without flaps
Weight (gr)	50

new design

Flashing light FL100

Adjustable flashing light with integrated aerial for 433.92 MHz frequency.

Easy installation: can be mounted in any position using the base designed for wall or horizontal installation.

Maximum security: with diffuser that rotates 360° to aim the signal in the most suitable direction. High efficiency lenses optimise visibility.

Integrated aerial, invisible from the outside for protection against vandalism.

Convenience: easy availability and replacement of the powerful lamp used in the automotive industry.

Durability: shock-resistant polycarbonate structure.

Technical characteristics

Power supply	Provided directly by the Mhouse system
Power (W)	21
Protection class (IP)	55

Buffer battery PR1 - PR2

24 V buffer battery for emergency power supply.

Convenience: operation during power failures guaranteed by the PR1 or PR2 buffer batteries housed inside the control unit, which can be connected using a convenient plug-in connector.

Mhouse won't let you down even during black-outs: at least ten opening and closing manoeuvres guaranteed.

Incorporated control unit: it controls batteries recharging, extending their life and always providing for the maximum charge when a black out happens.
